

Regional Ecosystems

Hi Land for Wildlife participants!

Join me on Saturday the 11 March for the first Land for Wildlife get together in 2023. This event is open to those wishing to join the program and will be a good opportunity to meet other landowners who are already on their LfW journey.

Our hosts will be Bruce and Maureen McCulloch. We will be meeting at their property at 57 Benian Road, The Palms.

Parking is available on the property, please follow the signs. If you need to get away early you may need to park on the side of the road.

Please bring your own chair for the first session of the day.

The topic for the day will be Regional Ecosystems. No doubt you will have heard environment types mention regional ecosystems. The objective of the day is to demystify this enigmatic phrase and engage in a practical exploration and demonstration of the features which contribute to defining a vegetation community.

Please RSVP to myself by the 9th March, 2023. There is a limit of 20 people for the morning so respond early.

Wear sturdy shoes, long pants and a hat.

Please feel free to distribute this invitation amongst your networks.

I do hope you can join us.

Yours sincerely,

Paul Sprecher
